

HYACARE®

PHYNUTRIC

Refined Potassium Humate

PHYNUTRIC

YACARE®

**Multifunctional organic plant growth stimulant
Evenly balanced for optimum crop and soil performance**

HYACARE®

- **Highest water solubility for any potassium humate**
- **Anti hard water performance rated at 30 DH**
- **Optimal 8-10 pH for improved blending**

PHYNUTRIC

HYACARE®

**Spray dried crystalline
powders for consistent
quality and performance**

The soil's static charge holds nutrients until they are absorbed by plant roots, fungi and soil microbes. The measure of this static charge is called the Cation Exchange Capacity or CEC.

Soils with a higher CEC will hold on to more nutrients for assimilation by plants. While soils with a lower CEC will require greater amounts of applied fertilisers to achieve the same level of crop yield.

PHYNUTRIC

When applied to soils, humic and fulvic acids form colloidal complexes which increase the CEC through formation of stable complexes with macro and micro elements that are essential for soil and plant health.

Use directly in solution for spray irrigation, drip irrigation

- Foliar application 1-3 kg diluted in 150-300 litres/ha
- Fertigation 7-15kg/ha subject to soil analysis
- Soaking seeds 10-24 hours in 1/2000 dilution
